### 3 Trends

Resource Intelligence - Weekly Report Activity

Announced drilling dropped to a 40-week low after having made an 18-week high last week. Could this be the beginning of the seasonal lethargy seen this time last year?

Exploration drilling updates came marginally off their 40-week high. Meanwhile, resource reports increased slightly, continuing the solid performance that has emerged since early September.

## Resource Estimation Report Authors

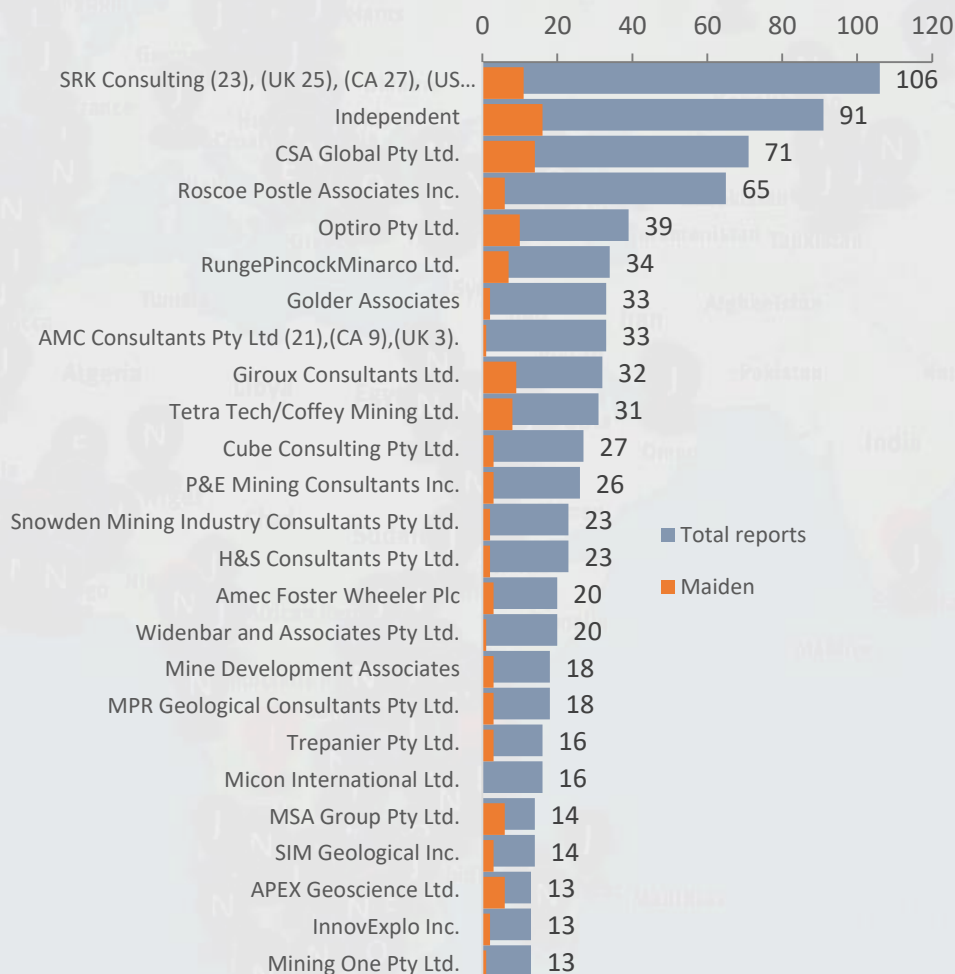

### This week

Note: Some reports can contain multiple resource QP's and consulting companies so numbers may not add up to total.

We have recently adjusted our methodology for producing the above graphs. We now only count a resource author where the resource status is maiden/updated/upgraded. Previously we counted a resource author even if the resource status itself was unchanged.

Note that the intersections reported here are extracted directly from the public reports. No additional verification of true widths or handling of outliers has been carried out. This listing is based on the assumption that all public reports are presenting information in a transparent and balanced way. If you know that any of the results presented here do not show a transparent and balanced representation of the mineralisation, then please contact us.
